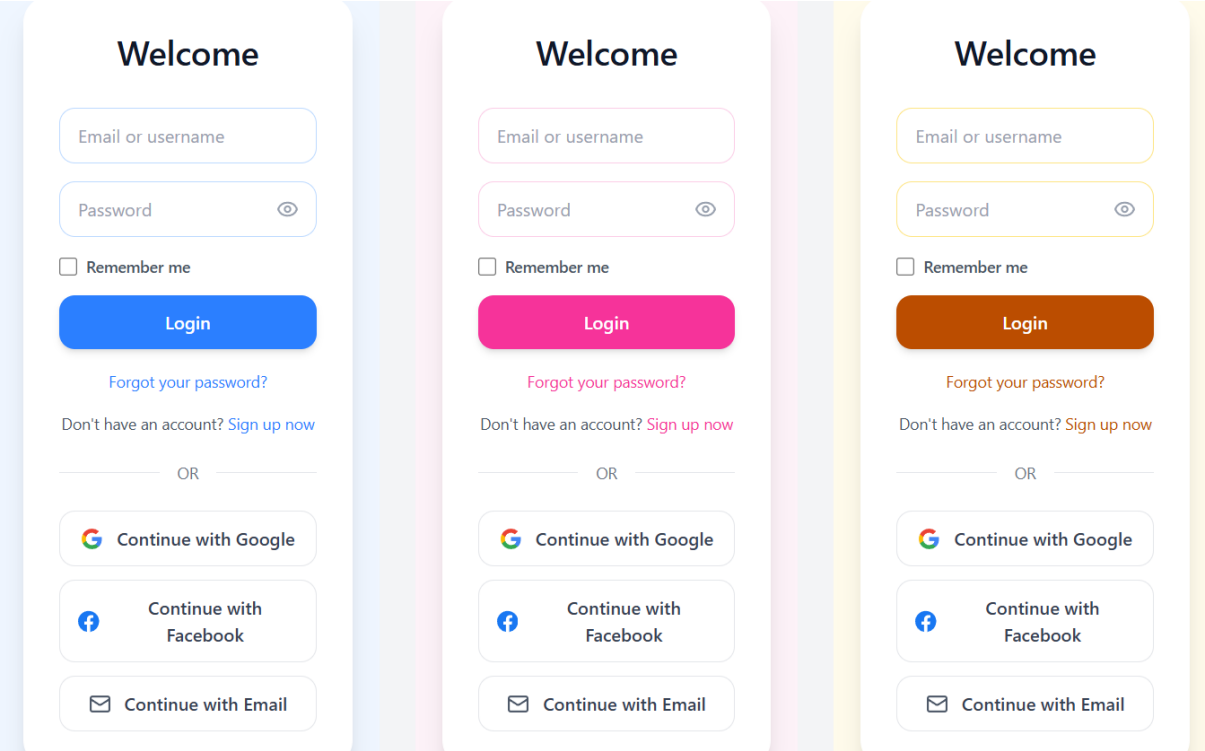
EXPERIMENT NO :7

USER INTERFACE DESIGN

SANGAMITHRA ARUN

240701465



Aim:

To design different app layouts with varied colour schemes using GIMP and evaluate user feedback based on aesthetics and usability.

Procedure:

Step 1: Install GIMP

- Download and install GIMP from the official website.

Step 2: Create a New Project

- Open GIMP.
- Set canvas size to 1080 × 1920 pixels (standard mobile screen).

Step 3: Base Layout Design

1. **Divide Sections:**
    - Use Rectangle Select Tool to define Header, Content Area, and Footer.
    - Fill sections using Bucket Fill Tool with base colours.
2. **Add UI Elements:**
    - Use Text Tool for headings, buttons, and labels.
    - Use Shape Tools for buttons, input fields, and placeholders.
3. **Layer Organization:**
    - Assign each UI component to separate named layers (e.g., Header, Button Login, Text Title, Input Field Email).

Step 4: Create Colour Variants

1. **Duplicate Layouts:**
    - Duplicate the project.
    - Modify each layout using different colour schemes with Colorize Tool or Bucket Fill.
2. **Save Layouts:**
    - Export designs as Layout1.png, Layout2.png, Layout3.png.

Step 5: Collect User Feedback

- Share all layouts with users.
- Ask them to evaluate based on:
    - Visual appeal
    - Usability
    - Readability
    - Colour preference

Step 6: Iterate and Refine

- Improve the design based on feedback.
- Conduct final testing for usability and aesthetics.

Result:

- Among the three designs, **Layout 1** was preferred by most users.
- It was considered clean, minimal, and professional with consistent spacing.
- Users found it more readable and visually balanced.
